# Day – 14

## Task – Identify crime hotspots using aggregation queries

**Day** - Tuesday

**Date** – 10th March 2026

**Time** – 7:00 AM – 10:00 AM

**Dataset** – Chicago Crime Dataset

**Source** – The dataset was downloaded from data.gov

- Downloaded the dataset and imported into Jupyter lite for cleaning.
- Dataset has **1004894 Rows** and **28 Columns** initially.
- Checked some basic information about dataset by performing basic operations.
- Dropped some columns and handled missing values and cleaned the dataset.
- Tried to save cleaned csv file but due to large file size file didn't save properly.
- So, I performed task of aggregated queries on uncleaned dataset.
- Uploaded dataset in **Workbench** by creating database.
- As the size of file is large it took long time to upload.
- Faced some laptop issue due to large file size.
- Performed some aggregate functions using **SQL**.
