

Day – 26
Task – Regression Modeling (CLV Prediction).

Day - Saturday

Date – 25th April 2026

Time – 7:00 AM – 10:00 AM

Dataset –Online_Retail.

Source – The dataset was downloaded from Kaggle.

Why this dataset - I chose this dataset because it has real shopping data with numbers, so it is easy to use for predicting sales values using regression.

- Downloaded the dataset and imported into **Jupyter lite** for cleaning.
- The dataset has **541009 rows** and **08 columns**.
- Imported necessary libraries and dataset using **function**.
- Performed basic operations to get data insights using function.
- Changed datatype of column where necessary.
- Handled missing values.
- Created new columns
- Selected features for model training.
- Trained model.
- Performed prediction.
- Saved clean dataset.
